

CALABRIA WATER DAYS 2014 AT THE INDUSTRIAL PARK OF RENDE (CS)

RICCINI, after the excellent results in 2013, reconfirm their presence at this young but dynamic event

At the début edition of the event in 2013, **RICCINI** obtained **excellent results** in terms of interest and **appreciation** for their products as well as **valid commercial results**.

We could not miss this second edition which bodes to be even more **interesting** and **complete**, thanks to the **excellent work of the organizers**.

During the **Calabria Water Days 2014**, in our stand you will observe some of **our product** such as HMPP pipes for sewage systems (compact and triple-layer wall **TriPPlo+** or double structured wall **kingcor**, both of them characterised by performances of extreme **excellence** along with **lightness**, **total tightness** junction, **ease** of installation, **eco-friendliness**).

From the left: palletes of Kingcor, Kingcor employed for the disposal of meteoric waters from viaducts, TriPPlo+ in a worksite in Veneto. Both products have light inside wall in order to facilitate video inspections

or **simple crown technical coupling**, suitable for the **connection** among sewage lines made of **different materials**, also with **different** diameter **normalizations**, suitable for the **connection** to new lines and for the realization of **inspections**, **trap-doors**...; also **simple crown** offers an **absolute** hydraulic tightness.

In our stand you will appreciate also triple layer **ecopozzo** pipes for **vertical perforations** in HMPP, characterised by **robustness, atoxicity, socket or threaded** junction and **resistance to high temperatures** (it is not by chance that in addition to the realization of civil and industrial **water wells, environmental remediation, pilots wells, cathodic protection systems, seismic tests**, they are successfully employed in the captation of **hot and very hot thermal waters**).

Above from the left: Simple Crown, coupling realized with Simple Crown, coil of Drenofilter, pipe detail:
below: two images for Ecopozzo; Unomattina (RAI1) TV show with Ecopozzo in the studio, Ecopozzo pipes

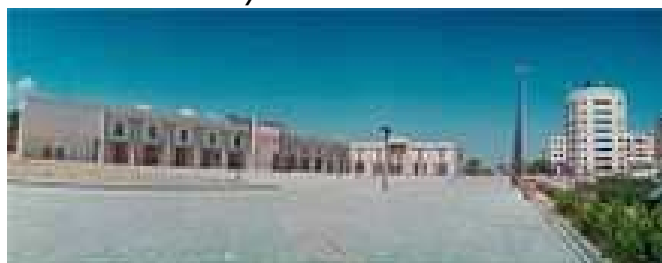

If you are interested in the **drainage** field, you will appreciate for sure the value of **drenofilter**, the **corrugated double wall pipe for draining**, in PEHD, **cladded** with non-woven **rotproof** and **eco-friendly geotextile**; an ideal instrument also for the installation with **pipe laying machines**.

Come and meet us, you will understand what the motto means for us

“Simplify your work...is our job!”

See you in **RENDE!**

The “Present Museum” in Rende (CS)
